Rows clean after fixes

I only got the fact table (*FactSale.csv*) — no lookup tables for products, customers, or salespeople. So a couple of items below aren't things I "fixed," they're just limits of what I was given. I flagged those instead of making up IDs or names that don't actually exist in the data.

Issue	Scope	How it was handled	Status
Missing Delivery Date	13 rows (0.05%)	Filled in as Invoice Date + 1 day — the pattern in 100% of the complete rows.	● Fixed
Inconsistent date text format	All rows	Parsed and standardized to ISO format (YYYY-MM-DD).	● Fixed
Numeric columns stored as quoted text	All rows	Verified / converted to proper numeric types.	● Fixed
Customer Key = 0 (no customer captured)	9,077 rows (34.4%)	Not an error — flagged with a new Customer_Type column instead of guessing an ID.	● Flagged
Duplicate rows	0 found	Checked full-row and Sale Key (primary key) duplication — none present.	● Checked
Negative Quantity / Unit Price	0 found	No invalid transaction volumes or prices.	● Checked
Negative Profit (loss-making sales)	566 rows (2.1%)	Kept as-is — a real, concentrated business finding (see Key Insights), not a data error.	● Kept
No product / customer / salesperson names	All rows	Only the fact table was provided (no dimension tables) — those fields are reported by ID.	● Noted

- ✓ Total Excluding Tax = Quantity × Unit Price — validated across all 26,397 rows
- ✓ Tax Amount = Total Excluding Tax × (Tax Rate ÷ 100) — validated across all 26,397 rows
- ✓ Total Including Tax = Total Excluding Tax + Tax Amount — validated across all 26,397 rows
